

RFP Response: BrightPath Tech

Executive Summary

BrightPath Tech offers a lean, cost-effective solution that can be delivered quickly, ideal for teams wanting to move fast without a large upfront budget.

Proposed Solution & Approach

We will build a single-service web application connecting to the client's existing SQL database. The system will expose a basic REST endpoint for data upload and a dashboard for results.

Timeline, Team & Milestones

We can deliver the full solution in 6 weeks using a small team of 2 developers. Milestones: Week 2 - basic upload flow; Week 4 - scoring logic; Week 6 - dashboard and handover.

Security & Compliance

Standard HTTPS is used for all traffic. Passwords are hashed. We are happy to discuss additional compliance requirements if the client can specify them.

Support & Experience

Email support is available during business hours (9am-6pm). This would be our first project specifically in the procurement-evaluation space, though we have built several internal dashboards for other clients.

Pricing Notes

Pricing assumes the client provides sample data in a ready-to-use CSV/JSON format; additional data-cleaning work would be billed separately at \$80/hour.

Price Table

Item	Detail	Cost (USD)
Development	One-time, 6-week build	18,000
Hosting	Annual	2,400
Support (Year 1)	Business hours, email only	3,000
Total (Year 1)	Dev + hosting + support	23,400
