

RFP Response: Orbit Digital

Executive Summary

Orbit Digital brings deep domain experience in procurement technology, having delivered similar systems for a range of enterprise and mid-market clients over the past decade.

Proposed Solution

We will build a web-based evaluation tool that connects to the client's data sources and produces supplier rankings. Specific integration mechanisms will be finalized during the discovery phase based on the client's existing systems.

Timeline & Team

Estimated delivery is 10-14 weeks depending on discovery findings. Our senior delivery team has an average of 8 years of experience in enterprise procurement software.

Security & Compliance

Orbit Digital is ISO 27001 certified at the company level. Standard encryption and access-control practices are applied to all client engagements; certificate and audit documentation is available on request.

Support Model, Experience & References

Orbit Digital has completed 7 comparable supplier-evaluation projects over the past 9 years, including for two Fortune 500 procurement teams. Three client references with contact details are available on request. Support is offered via a dedicated account manager with a 24-hour response SLA.

Risks

Because the exact integration approach depends on discovery-phase findings, final architecture details and timeline may shift after week 2.

Price Table

Item	Detail	Cost (USD)
Discovery & Design	2-3 weeks	12,000
Build & Integration	8-11 weeks, scope TBD post-discovery	38,000
Annual Support	24-hour SLA, dedicated AM	7,200
Total (Year 1, est.)	Discovery + build + support	57,200
